Investment objective

To grow the value of your investment over the long term by investing in a diversified portfolio of broad based Australian shares.

Investment strategy

The Australian Broad Based Shares Fund (Fund) gains its investment exposure by investing in a diversified portfolio of listed securities found on the Australian Stock Exchange (ASX).

The investment manager utilises a disciplined and risk-controlled quantitatively driven investment process that seeks to add value primarily from bottom-up security selection with the remaining amount from top-down drivers. Bottom-up analysis consists of utilising a range of factors including valuation, quality, earnings, size and price momentum, whilst from a top-down perspective, valuation, quality, technical and economic indicators are used but are obviously customised to the Australian market.

The Fund is authorised to utilise approved derivative instruments subject to the specific restriction that derivative instruments cannot be used to gear portfolio exposure.

When used for investment purposes, no more than 30% of the Fund can be exposed to derivative instruments as determined by their market equivalent exposure.
